

courtroom technology refresh and upgrade

We have been designing, installing and commissioning courtrooms in Australia and New Zealand since the introduction of digital information management systems. We specialise in replacing dated, unreliable and impractical analogue technology with tested and future proof digital solutions

Our Belief

A well integrated digital evidence solution must consider not only the 'in court experience' but also the broader functions of the courtroom in a manner that respects the way courts and courts users operate.

The capture of evidence at the highest quality is a core function of a modern court or hearing room and is a key ingredient of the Evidence Value Chain.

"retaining the traditional aesthetics of a court or hearing room is often a fundamental for our clients"

David Walker, Senior Courtroom Design Engineer

This cannot be achieved with a 'one-size-fits-all' approach to design and implementation, as every room possesses subtle yet influential differences.

Evidence Technology offers custom integrated solutions that ensure accurate recording and storage, powerful digital display and sensitive sound reinforcement. Our unwavering commitment to quality underpins our highly accurate and responsive service.

The 'Way' We Work

Our approach to technology refresh and upgrade works is based on lessons learned from hundreds of prior projects in Australia, New Zealand and abroad.

Evidence Technology follows a clearly defined series of phased stages in our engagement with Clients.

We define the pre-conditions for engagement at each stage, the work we will perform, and the expected outcomes. By doing this systematically, all parties stand to benefit from consistency, quality and reduced uncertainty.

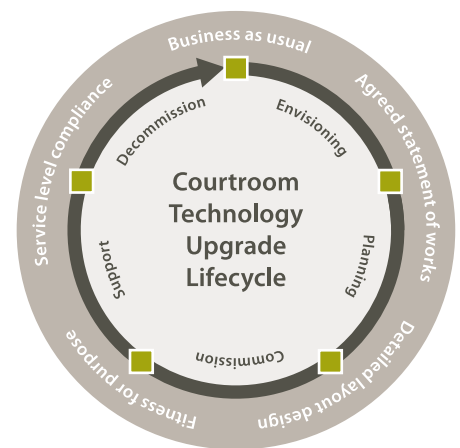

Our Solutions

Our truly functional digital hearing rooms mitigate the potential risks of aging analogue equipment, and offer users a powerful audio visual experience that enhances comprehension without compromising on appearance. Our consultation-driven process results in balanced acoustics, unobtrusive digital sound reinforcement, high-clarity audio recordings and practical audio-visual communication.

In addition to our recording and sound reinforcement solutions, we have extensive experience in providing one off and fixed installation video conferencing solutions. These solutions are delivered with comprehensive technical support and the flexibility of our remote video conferencing network, making reliable connections anywhere in the world a real possibility.

Focus on Quality of Service

Evidence Technology understands that there is no substitute for quality and local dedicated support personnel for effective delivery of normal and critical support. Maintaining and building strong relationships with associated service providers enable our business to be highly responsive and fully accountable for outcomes.

Solutions Delivered

We have delivered over 130 courtrooms to date a number of these achievements are listed overleaf.
